senddr

ELEVATE

EASY INSTANT INVOICING

Senddr allows you to easily receive electronic invoices from your suppliers

Senddr is a unique transactional network that instantly transfers invoices between accounting/ERP systems. Our accounting software connector brings enterprise scale eInvoicing to businesses everywhere.

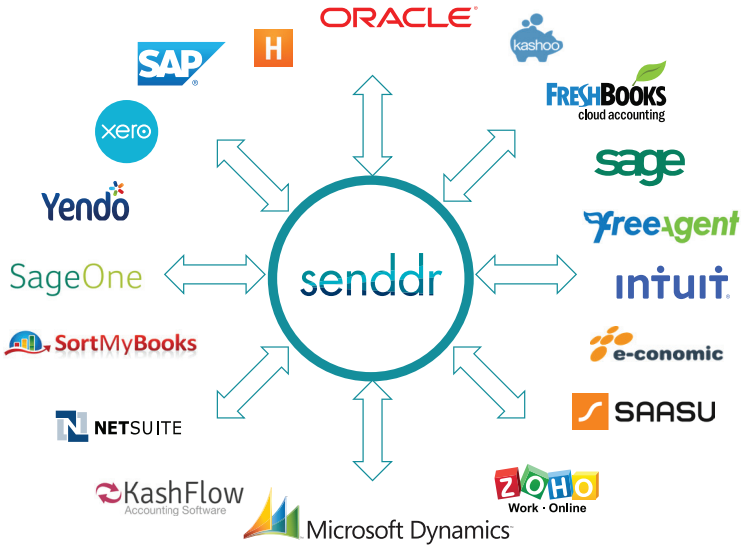
Your suppliers very often don't have the time or resources to use EDI, einvoicing portals or custom connectivity to electronically submit their invoices into your business. Senddr is a new approach that connects directly into their accounts to extract invoices and send them onwards into your ERP systems in a standardised format.

Receiving Purchase Invoices

- Purchases saved directly to your accounts/ERP with no data-entry
- Reduction in supplier payment enquiries
- Automated PO and tax validation
- Overlay invoices with Vendor, Site and Org IDs
- Invoice staging area for manual review and editing

Sending Sales Invoices

- Instantly transfer invoices into your customers accounts
- Get a receipt when your invoice is delivered
- Get an alert when your invoice is marked as paid



Easy to Setup & Easy to Use

With no coding or integration required, Senddr can be configured to connect to financials in less than 30 seconds. As invoices are created, Senddr validates them in the background before the supplier sends them.

We have created comprehensive integration guides for Oracle Financials, SAP and MS Dynamics allowing you to quickly create connectivity between Senddr and your ERP systems. In rare cases where connectivity isn't possible Senddr also provides EDIFACT, Tradacoms, Excel or CSV file transfer over sFTP, email or AS2.

ISO 27001 Compliant Solution

The Senddr solution has been built for large and small enterprises alike. It is ISO 27001 compliant, the gold standard in information security.

Senddr also uses the latest and strongest encryption techniques available to reliably and securely deliver your invoices.
